**DRYRight™**

Fiber Glass Insulation

**NEW!**

## Help Insulate Against Mold Growth with DryRight™

Moisture that becomes trapped in wall cavities can lead to mold growth and related problems – including structural damage, callbacks and liability issues. DryRight insulation from CertainTeed helps reduce the presence of one of the key components for mold and mildew growth – moisture – by allowing excess moisture in wall cavities to escape.

DryRight, available in both batts and rolls, utilizes a unique technology that helps to control excess moisture. When installed properly, DryRight helps wall cavities to stay dry and mold-free – helping you to avoid unhappy customers.

Quality made certain. Satisfaction guaranteed.™

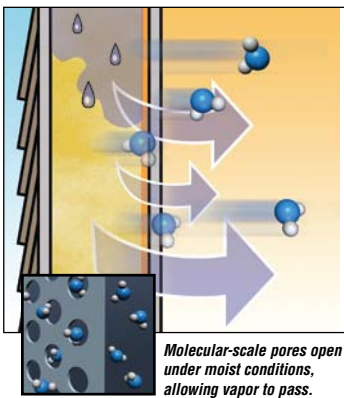

# Help Insulate Against Mold Growth with DryRight™

## Moisture Control Through Innovative MemBrain® Technology

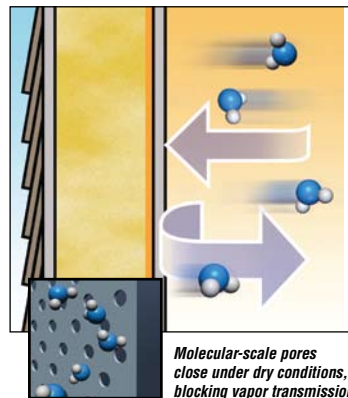

DryRight is R-13 and R-19 insulation faced with MemBrain®, the “smart” vapor retarder. MemBrain changes its ability to resist the flow of water vapor depending on the conditions within the construction assembly. This innovative facing allows water vapor to pass through when relative humidity is high, either from seasonal changes or moisture intrusion. When humidity is low, MemBrain works to block the passage of moisture to reduce the likelihood of condensation on cold surfaces within the construction cavity.

*During the cooling season, when average relative humidities in insulated cavities are typically high, MemBrain changes its permeance to increase the system's drying potential.*

*During the heating season, when average relative humidities in insulated cavities are typically low, MemBrain works as a vapor retarder.*

*Molecular-scale pores open under moist conditions, allowing vapor to pass.*

*Molecular-scale pores close under dry conditions, blocking vapor transmission.*

## Easy to Install

DryRight is tabless and sized to friction fit between wall studs and ceiling and floor joists for fast, easy installation.

## Long-Term Peace of Mind

Although DryRight costs a little more than conventional insulation, it will pay for itself through greater customer satisfaction, fewer callbacks, and long-term peace of mind.

## GREENGUARD® Certified

CertainTeed's fiber glass building insulation is GREENGUARD® certified. Our products have been tested for emissions of formaldehyde, VOCs, respirable particles and other pollutants using the strongest environmental protocols. All tested products must meet the GREENGUARD standards or they are not certified. GREENGUARD certified products contribute very low levels of pollutants to the indoor environment.
