

Product Data and Submittal

GOLDLINE® PLATINUM Paper-Faced Drywall Trims

GOLDLINE® PLATINUM Paper-Faced Metal Drywall Beads and Trims are made with a unique, high quality paper laminated to various galvanized metal forms. The metal provides maximum strength and protection for the corner while the paper provides reinforcement to prevent cracking caused by the movement or shrinkage of framing members, the result is a clean, precise corner with superior resistance against rust, edge cracking and fastener popping.

Benefits:

- Virtually impervious to scuffing and "fluffing up"
- Will not be damaged by sanding
- Requires no nose coating
- Has no added coloring to bleed or flash through
- Enhanced drywall compound bonding
- Enhanced paint ability
- Fewer call backs for repairs
- Patents # 5,613,335 & 5,836,122 U.S. / 2,212,854 Canada / 302378 New Zealand / 695482 Australia / 2,316,104 Great Britain
- Available in stock lengths of 8', 9' and 10' other lengths may be factory ordered

Recommended usage:

- 90 degree outside/inside drywall corners
- Offset outside/ inside drywall corners

Cautions:

- Product must be kept in a dry area
- Product should be kept free of grease, dirt & dust for optimum performance

General information

ASTM STANDARDS: All GOLDLINE® PLATINUM DRYWALL TRIMS meet or exceed all ASTM C1047 specifications.

JOB CONDITIONS:

Drywall must be clean, dry and firmly attached before the trim is installed. A ¼ " gap should be between the bottom edge of the trim and the floor surface to allow for expansion and contraction of the framing members The proper width of trim should be selected to be sure all gaps in drywall are covered. A taping type drywall compound should be used to install the trim, "All Purpose" or "Finishing" compounds may be used for top coats. Drywall compound must be completely dry between coats before additional compound is added and before decorating commences.
