

Keep your new basement safe and dry

One of the most important features of your new house is buried underneath it.

Most people don't think too much about the foundation when they're having a new house built. Siding style, roof shingle color, interior amenities — these are the areas you focus on as you envision your family living in this wonderful new place you'll call home.

Fortunately, CertainTeed did put some thought into the foundation — and the innovative Form-A-Drain® system is the result.

Over 100 million feet of Form-A-Drain have been successfully installed since 1992. That's hundreds of thousands of homes with zero documented instances of wet basements!

Lineals are manufactured from **100% Recycled PVC** to support "Green" construction practices!

Form-A-Drain offers you three key benefits:

- A better way to build the foundation
- A drainage system that's integrated directly into the foundation
- Easy adaptation for radon evacuation

buildingresponsibly™

CertainTeed respects the environment through the responsible development of sustainable building products and systems.

Quality made certain. Satisfaction guaranteed.

Form-A-Drain™

Think of it as Underground Insurance

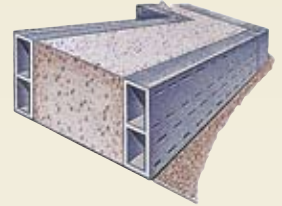

Although you don't see it, the system at the very base of your home that provides drainage to your foundation plays a critical role in keeping your basement or crawlspace dry. CertainTeed Form-A-Drain is the highest quality, most innovative foundation drainage system on the market today.

Form-A-Drain outlines the footing, a strip of concrete that defines the basement perimeter and upon which the basement walls rest. Because it's installed before the footing is poured and stays in place permanently, Form-A-Drain is always in the optimum position — right up against the side of the footing and level with its top — to provide superior drainage, either to a sump pit or away from the house.

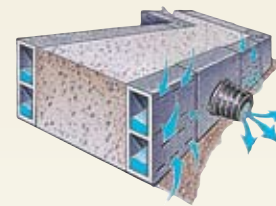

Other drainage systems are designed to be installed after the footing is poured, making it difficult to maneuver them into the correct position. As a result, they may not be as effective in channeling water from your foundation.

Form-A-Drain's unique design and the fact that it encloses the entire perimeter of the foundation

Forms Footings

also allow it to be adapted for use as part of a radon venting system where needed. This avoids the need to drill holes in your new walls and floors after the house has been built.

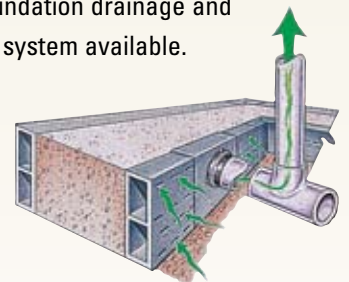

You don't see Form-A-Drain once your new home is complete, but knowing it's there,

Drains Foundations

helping to keep you and your family dry and comfortable, is a good feeling.

Start off on the right footing. Tell your builder you want Form-A-Drain, the best foundation drainage and venting system available.
