Footnotes:

- ¹All acoustical ceilings must have a trim edge unless otherwise denoted.
²Panels may have trim, reveal, or narrow reveal edge.
³Restricted areas require a monolithic construction and therefore, suspended ceiling systems are not permitted.
⁴It is likely that ceiling panels alone will not achieve required acoustics for waiting room. Consider adding wall panels.
⁵Recommended for use when there are full height wall partitions.
⁶Recommended for use when there is an open or shared plenum.
⁷Only use in areas where no noise absorption is required.
⁸Must be gasketed.
