CertainTeed respects the environment through the responsible development of sustainable building products and systems.

By utilizing Building Science, and by taking a life cycle perspective, our products and systems are manufactured to meet the high-performance demands of today’s buildings, as well as to reach even higher goals for the future. By working with others, we’re demonstrating that we are genuine advocates of building responsibly.

GlasRoc® Sheathing is a high performance, water resistant, gypsum-based exterior sheathing.

GlasRoc Sheathing offers a patented technology of a high performance polymer coating on reinforcing glass mat facers. This unique coating provides a superior water and UV resistant surface for long term protection to weather exposures.

The “paperless” glass mat facers are embedded into a water resistant gypsum core, and positioned beneath a polymer modified gypsum surface.

**GlasRoc Sheathing offers:**

- Long term protection (12 months) to weather exposure.
- A superior water resistant surface that does not inhibit water vapor permeance.
- Excellent fire resistance properties, and numerous fire rated designs.
- Mold resistance.
- Durability - resists delamination due to embedded glass mat in the gypsum core.
- Strength – with enough flexibility to bend to curved surfaces.
- A lightweight sheathing that cuts like regular gypsum board and is easy to handle and install – with minimal skin irritation due to embedded glass mats.
- Conformity to design and code requirements.

GlasRoc Sheathing led the next generation of the industry standard for high-performance, weather-resistive, gypsum-based sheathing. To back it up, CertainTeed provides a:

- 12 month limited warranty against exposure
- 5 year limited warranty assuring product performance
- 12 year substrate limited warranty in architecturally-specified EIF Systems

*Covered by U.S. Patent No. 6,524,679; 6,878,321; 6,866,492; and other patents pending.

Better Physical Performance
Tested in accordance with ASTM C1177, and applicable ASTM C1396 sections, GlasRoc® Sheathing meets or exceeds all physical property requirements. Results showed improved physical performance compared to glass-faced gypsum sheathing including:
- Reduced humidified deflections
- Superior flexural strengths
- Excellent nail-pull resistance

Enhanced Dimensional Stability
GlasRoc Sheathing will withstand normal exposure to UV, rain, wind, ice, and snow. It is dimensionally stable under changes in temperature and relative humidity. To back it up, CertainTeed provides a 12 month exposure limited warranty.

Excellent Fire Protection
Testing in accordance with ASTM E136 proved that GlasRoc Sheathing, with its polymer coating, is noncombustible and offers superior fire performance compared to paper-faced sheathings. It has a zero flame spread and zero smoke developed index when tested per ASTM E 84 (5/5 when tested per CAN/ULC-S102) for surface burning characteristics.

GlasRoc Sheathing Type X is UL/cUL and ULC Classified for Fire Resistance for use in fire-rated designs. (UL/cUL and ULC Designations - Type EGRG or GlasRoc or GlasRoc Sheathing Type X).

Easy to Handle and Install
GlasRoc Sheathing is handled and installed like regular paper-faced sheathing. In addition, it:
- Can be scored and cut with a standard utility knife. No special tools required.
- Snaps free after scoring only one face.
- Attaches to framing with the same fasteners used for paper-faced gypsum sheathing. No special fasteners required.
- Is easier to handle because skin irritations are minimized due to the embedded glass mats and our innovative polymer coating.
- Has uniform field and edge hardness, making trimming & fastening quick and easy.

Long Term Protection to Weather Exposure
GlasRoc Sheathing, with its homogenous water resistance throughout the board, offers superior freeze/thaw resistance. It will withstand exposure to UV, rain, wind, ice and snow. To back it up, CertainTeed provides a 12 month exposure limited warranty. GlasRoc Sheathing provides enhanced surface liquid water resistance while allowing the building’s vapor drive to be unimpeded.

Mold Resistance
Because GlasRoc Sheathing contains no starches or sugars, it will resist mold growth. When tested in accordance with ASTM D3273, GlasRoc Sheathing exhibited no evidence of mold or fungal growth after a period of 28 days of exposure, yielding a rating of 10.

Increased Durability
GlasRoc Sheathing resists delamination because the glass mats are embedded into the panel, creating a more durable, dimensionally stable panel.

Standards and Code Compliance
GlasRoc Sheathing conforms to ASTM C1177 and applicable ASTM C1396/ CAN/CSA-A82.27 standards.

Installation standards, where applicable, are Gypsum Association Publication GA-253, GA-216 and ASTM C1280 for gypsum sheathing and soffits.

GlasRoc Sheathing is a compatible substrate for air/water barrier systems tested in accordance with CAN/ULC-S741.

Superior Strength
GlasRoc® Sheathing integrally bonds its face coating to the moisture resistant core, resulting in a superior protective sheathing that will perform in all climates.

Dimensional Stability
GlasRoc Sheathing resists delamination, rippling, buckling and sagging caused by environmental conditions, such as freeze/thaw, heat and humidity, and direct UV exposure. This technology, with its embedded glass mats, makes GlasRoc Sheathing state-of-the-art, and will provide a flat and uniform substrate for EIFS applications.

Moisture Resistance
When properly installed, GlasRoc Sheathing blocks liquid water without inhibiting water vapor transmission. The result is a protective surface that is extremely resistant to water damage.

Easy to Install
GlasRoc Sheathing is easier to handle and install. No special tools are required. Score it with a standard utility knife. Install it with standard sheathing fasteners.

Referenced Standards
- ASTM C514: Specification for Nails for the Application of Gypsum Board
- ASTM C954: Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.33 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness
- ASTM C1002: Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases
- ASTM C1177: Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing
- ASTM C1280: Standard Specification for Application of Gypsum Sheathing
- ASTM C1397: Practice for Application of Class PB Exterior Insulation and Finish Systems
- ASTM E96: Test Methods for Water Vapor Transmission of Materials
Cavity Wall Applications

GlasRoc® Sheathing offers a protective, smooth, water-resistant application surface which will withstand water penetration into the stud cavity, so a separate weather-resistant barrier may not be necessary, unless required by local code. To best prevent air and water intrusion (when a separate weather resistive barrier is not required by local codes), the joints should be treated with exterior silicone caulk and glass mesh tape. Consult with authority having jurisdiction, prior to installation regarding local requirements.

Installation Recommendations

When installing a brick or stone veneer over GlasRoc Sheathing, attach the brick or masonry ties through the GlasRoc Sheathing to the structural framing supports. Consult the manufacturer or local building code authority for proper spacing and installation of brick or masonry ties.

Referenced Standards

- ASTM C514: Specification for Nails for the Application of Gypsum Board
- ASTM C954: Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.33 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness
- ASTM C1002: Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases
- ASTM C1177: Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing
- ASTM C1280: Standard Specification for Application of Gypsum Sheathing
- ASTM E96: Test Methods for Water Vapor Transmission of Materials
GlasRoc® Sheathing's integral coated surface with its high surface bond strength provides an excellent water-resistant surface for conventional stucco applications. The treated core adds to the water-resistive performance of the product. Conventional stucco systems rely on the structural soundness of the sheathing component to which they are applied. GlasRoc Sheathing offers physical properties superior to competitive gypsum sheathing products in the market. It is manufactured to meet or exceed the physical property requirements outlined in ASTM C1177.

**Installation Recommendation**

In a conventional stucco system, metal lath or other specified self-furring components should be attached to the framing members through the GlasRoc Sheathing, after the appropriate flashing is installed. Always use appropriate joint treatment when required. Apply the stucco, as recommended by the manufacturer.

- ASTM C1280: Standard Specification for Application of Gypsum Sheathing
- ASTM E96: Test Methods for Water Vapor Transmission of Materials

**Conventional Stucco Applications**

GlasRoc® Sheathing is a superior water-resistant surface for conventional stucco applications. It is preferred over competitor products due to its superior physical properties.
There are numerous exterior claddings available today, from shingles to shakes to a multitude of siding alternatives. GlasRoc® Sheathing is an excellent choice for any of these applications. Simply install GlasRoc Sheathing and apply the preferred exterior cladding, per the manufacturer’s recommendations. Depending on local building codes, a joint treatment, building felt, or building wrap may be necessary.

Gypsum Board & Finishing Products from CertainTeed  •  Call Toll Free 800-233-8990  •  www.glasroc.com  •  www.certainteed.com
Exterior Archways, Exterior Concave & Convex Surfaces

GlasRoc® Sheathing is engineered for use in curved exterior gypsum board applications. There is no need to score or moisten the board to bend it. To prevent flat areas in the curved surface, framing should be positioned at a maximum spacing of 6" (150 mm).

Consult the Gypsum Association document GA-226 for framing recommendations.

Application to Archways

GlasRoc Sheathing can be installed in an archway or on a concave or convex surface by applying pressure onto the board to fit the radius and then holding it firmly in place while fastening it to the framing members. To best seat the product in tight radius applications, temporarily install a stop at one end of the framed radius to serve as a restraint support. Install the product with coated side out with one of the width ends placed flush against the temporary stop and secure with fasteners, one framing member at a time. Repeat until the product has been secured to all framing members. Fasteners should be spaced no greater than 8" (200 mm) apart.

**Flat Ceiling Entryways, Exterior Ceilings & Soffits**

The industry defines the amount of permissible sagging in a horizontal application as humidified deflection. There are several ASTM Standard Specifications that define a maximum allowable humidified deflection including ASTM C1396 and ASTM C1177. Of these, ASTM C1177 has the most stringent requirements. Note how GlasRoc® Sheathing performs.

**Installation Recommendations for Exterior Ceilings & Soffits**

Use GlasRoc Sheathing in exterior ceiling and soffit systems where weather-resistant performance is critical, including but not limited to, ceilings/soffits with finished joints and ceilings/soffits without insulation. Install the product like a standard gypsum exterior soffit board. Fasten the product to the framing members using the recommendations specified in GA-216 and ASTM C840. Finishing is accomplished with either; 1) Direct - Applied Exterior Finish System (DEFS) per the manufacturer’s specifications, or 2) applying nominal 2” glass mesh drywall tape and 90 minute setting-type joint compound on the board joints, skim-coating the entire surface of the ceiling soffit with a setting-type compound and priming and painting with exterior grade primer and paint per the manufacturer’s recommendations.

UL Design N502

2-Hour Fire-Resistance Rating

STEEL BEAM
Attach channels to steel deck with 1/2" (12.7 mm) Phillips pan head screws spaced 12" (300 mm) o.c. Fabricate channel brackets by cutting notches in channel at location of corners and fold channel to form U-bracket of the required size. A minimum 1/2" (12.7 mm) clearance is required at sides and bottom of the beam.

Attach channel to angle 24" (600 mm) o.c., with 1/2" (12.7 mm) Phillips pan head screws. Place steel corner angle at lower corners of U-brackets. Apply a base layer of 5/8" (15.9 mm) GlasRoc Sheathing Type X with 1-1/4" (32 mm) Phillips pan head screws spaced 16" (400 mm) o.c. Apply a face layer of 5/8" (15.9 mm) GlasRoc Sheathing Type X with 1-3/4" (44 mm) Phillips pan head screws spaced 8" (200 mm) o.c. Joints must be offset from the joints in the underlaying layer. Attach corner bead to corners. Tape and finish joints.

Reference:
UL Design X528

2-Hour Fire-Resistance Rating

STEEL COLUMNS
Position steel studs at column corners. Steel studs to be 1/2" (12.7 mm) less than assembly height.

Apply a base layer of 5/8" (15.9 mm) GlasRoc Sheathing Type X vertically with 1" (25 mm) Phillips pan head screws spaced 24" (600 mm) o.c. Apply a face layer of 5/8" (15.9 mm) GlasRoc Sheathing Type X vertically around the perimeter with 1-3/4" (44 mm) Phillips pan head screws spaced 12" (300 mm) o.c. Apply corner bead with 1-5/8" (41 mm) screws spaced 12" (300 mm) o.c. Tape and finish joints.

Beam Protection: GA File No. BM 2120 and BM 2130.
Fastening patterns and other detailed information for the recommended handling, storage, and application of gypsum sheathing can be found below and in the following GA installation specification guides: GA-253 Application of Gypsum Sheathing, GA-254 Fire Resistant Gypsum Sheathing, GA-216 Application and Finishing of Gypsum Board, GA-226 Application of Gypsum Board to Curved Surfaces.

**Fastening Guidelines**

- Fasten GlasRoc® Sheathing using only recommended nails or screws.
- Always apply GlasRoc Sheathing to a flat and even framing surface.
- Drive fasteners to a point even with or slightly below [no greater than 1/32" (0.8 mm)] the surface of GlasRoc Sheathing, without penetrating glass mat.
- Locate perimeter fasteners a minimum of 3/8" (10 mm) from edges and ends with a maximum spacing of 8" (200 mm) o.c.
- For shear resistance applications, space perimeter fasteners a maximum 4" (100 mm) o.c.
- Space fasteners in the field of the board a maximum of 8" (200 mm) o.c.

**Limitations**

- Do not use staples or adhesives to fasten GlasRoc Sheathing to framing members.
- Do not attach GlasRoc Sheathing to framing surfaces with a plane variance greater than 1/8" (3 mm).
- Do not overdrive fasteners. Be careful not to break the protective surface coating, fracture the underlying core, or penetrate the glass mat.
- GlasRoc Sheathing is not recommended or intended for use as a fastening base.
- Not recommended for applications where continuous exposure temperatures exceed 125°F (52°C).

### Framing & Joint Treatments

#### Wall Framing

Where required, diagonal let-in bracing is recommended for corners.

- **1/2" (12.7 mm) GlasRoc Sheathing** should be fastened to wood or steel framing spaced no more than a maximum of 16" (400 mm) o.c. for parallel to stud framing and maximum of 24" (600 mm) o.c. for perpendicular to stud framing.
- **5/8" (15.9 mm) GlasRoc Sheathing Type X** should be fastened to wood or steel framing spaced no more than a maximum of 24" (600 mm) o.c.

#### Ceiling and Soffit Framing

- **1/2" (12.7 mm) GlasRoc Sheathing** should be fastened to wood or steel framing spaced no more than a maximum of 16" (400 mm) o.c. for parallel to stud framing and maximum of 24" (600 mm) o.c. for perpendicular to stud framing.
- **5/8" (15.9 mm) GlasRoc Sheathing Type X** should be fastened to framing spaced no more than a maximum of 24" (600 mm) o.c. parallel or perpendicular to wood or steel framing.

What is Covered?
5 Year Limited Warranty Against Defects
CertainTeed Gypsum ("CertainTeed") warrants that its GlasRoc® Sheathing ("Product") shall be free from defects in the manufacture of materials that make it unsuitable for its intended use, and that it meets or exceeds the manufacturing requirements and specifications of ASTM C1177.

12 Month Warranty Against Exposure
CertainTeed further warrants for up to twelve (12) months that the Product will withstand exposure to normal weather conditions, e.g., UV, rain, wind, ice and snow, so long as the Product is stored and installed according to CertainTeed’s instructions contained in Sections 1.6 and 3.1 of the GlasRoc Sheathing Architectural Specifications.

The 12 Month Limited Warranty shall and the 12 Month Limited Warranty extend to dealers who sell this Product, contractors who install this Product, and the original owner of the building within the warranty period. Neither the 5 Year Limited Warranty nor the 12 Month Limited Warranty may be assigned or transferred.

How Long Does Coverage Last?
The 5 Year Limited Warranty shall commence with the date of purchase by the installing contractor or product applicator, and continue for five (5) years. The 12 Month Limited Warranty shall commence on the date of installation of the Product and continue for twelve (12) months.

What is Not Covered?
CertainTeed shall not be responsible for any loss resulting from any of the following:

• Installation practices not in accordance with CertainTeed’s published recommendation and specifications.
• Improper design or installation of any component or portion of the structure.
• Damage to GlasRoc Sheathing caused by an EIFS system not installed in accordance with the application instructions of the EIFS manufacturer, the architectural specifications or ASTM C1397, “Standard Practice for Application of Class PB Exterior Insulation and Finish Systems”.
• Moisture intrusion defects including insect, fungus, and mold infestation resulting from the use of other manufacturers’ products.
• Failure of the owner to maintain the building with reasonable care.
• Use of GlasRoc Sheathing as a substrate for any exterior or coatings that are directly applied to the panel surface (excluding soffit areas).
• Excludes damage caused by improper handling or storage, immersion in water, floods, fires, hailstorms, earthquakes, high winds, hurricanes, acts of nature, falling objects, settling of the building, movement of the framing members, failure or distortion in the walls or foundation of the structure.
• CertainTeed is not responsible for the performance of the exterior system applied over GlasRoc Sheathing including but not limited to coatings, cladding and wall coverings.

Effect of State/Provincial Law

This warranty states the full extent of CertainTeed’s responsibility for defects in the Product. All other representations and warranties either expressed or implied, including warranties of fitness for a particular purpose or merchantability, are hereby disclaimed. In no event shall CertainTeed be liable for loss of profits or any consequential, special, incidental, indirect or punitive damages, whether based upon breach of warranty negligence, strict liability, tort, breach of contract, or any other legal theory. Some states do not allow the exclusion or limitation of warranties or do not allow the exclusion or limitation of incidental or consequential damages, so the above disclaimers may not apply to you.

What will CertainTeed do?
CertainTeed will, at its option, provide replacement Product or a refund up to double the purchase price.

How To Handle Claims?
Submit all claims in writing within 30 days of the defect discovery, including a brief description of the damaged area, with a copy of the dated sales receipt, invoice and evidence of installation date, to:

CertainTeed Gypsum
20 Moores Road
Malvern, PA 19355
USA
Attn: Product Manager,
GlasRoc Sheathing

To effect this sole and exclusive remedy, the claim must be submitted in writing prior to the end of the warranty period.

This shall constitute the total liability of CertainTeed and the exclusive remedy of the customer. There are no other warranties, express or implied, including any warranty of merchantability or fitness for a particular purpose. Liability is limited to the above and CertainTeed shall in no event be liable for labor charges, including but not limited to, labor charges in connection with removal or replacement, nor for incidental or consequential damages.

No representative of CertainTeed has the authority to make any representation or promise with respect to this limited warranty or otherwise amend, restate, or supplement this limited warranty. This warranty applies to GlasRoc Sheathing sold on or after January 1, 2008, in the U.S. and Canada.
Section 09253 / 06 16 00 - Sheathing

Part 1-General

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1, Specification Sections, apply to this Section.

1.2 SUMMARY
A. This Section includes the following:
   1. Embedded Glass Reinforced Gypsum (EGRG™) Sheathing Board.

1.3 DEFINITIONS
A. Gypsum Board Construction Terminology Standard: Refer to ASTM C111 for definitions of terms for gypsum sheathing board construction not defined in this Section or in other referenced standards.

1.4 SUBMITTALS
A. Submit in accordance with Section 01330.
B. Product Data: For each type of product indicated.
C. Informational Submittals: Submit manufacturer’s instructions, special attention required, and perimeter conditions requiring special attention.

1.5 QUALITY ASSURANCE
A. Fire-Test-Response Characteristics: For assemblies with fire-resistance ratings, provide materials and construction identical to those of assemblies listed for fire resistance per ASTM E119 (UL 263, CAN/ULC-S101) by a testing and inspecting agency acceptable to authorities having jurisdiction.

1.6 DELIVERY, STORAGE, AND HANDLING
A. Store materials protected against damage from weather, direct sunlight, surface contamination, construction traffic, or other causes. Stack CertainTeed GlasRoc® Sheathing flat on leveled supports off the ground, under cover, and fully protected from weather.

1.7 COORDINATION
A. CertainTeed GlasRoc Sheathing:
   1. EGRG™ Sheathing Board: Intended for use to 12 (twelve) months of exposure following installation.

1.8 WARRANTY
A. Manufacturer’s standard warranty for product exposed to weather without failure, when installed in accordance with manufacturer’s requirements, for period of not less than 12 months.

SAFETY:
For more information, consult the Safety Data Sheet by contacting CertainTeed at 1-800-233-8990 or email: building.solutions@certainteed.com. For an electronic copy of this specification, please visit: www.certainteed.com

Part 2-Product

2.1 GYPSUM SHEATHING
A. Embedded glass mat gypsum sheathing meeting the requirements of ASTM C1177.

   1. CertainTeed Gypsum, Inc.
      a. Basis of Design: “GlasRoc Sheathing” with EGRG™ technology
      b. Substitutions: Submit in accordance with Section 01400.
   2. Type and Thickness: Type X, 5/8 inch (15.9 mm) thick where indicated and as otherwise required to meet fire rating for specific element. [1/2 inch (12.7 mm) elsewhere.]
      a. Flame spread: ASTM E84: 0; CAN/ULC-S102: 5
      b. Smoke developed: ASTM E84: 0; CAN/ULC-S102: 5
   3. Size: 48 by not less than 96 inches (1219 by not less than 2438 mm); longer lengths as available to reduce number of joints.

2.2 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS
A. Silicone Emulsion Sealant: Meeting ASTM C930, Type S, Grade NB, compatible with glass fiber mesh tape and for covering exposed fasteners.
B. Glass-Fiber Mesh Tape: Self-adhering glass-fiber tape, nominal 2 inches (50 mm) wide, of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing board and with a history of successful in-service use.

2.3 ACCESSORY MATERIALS
A. Fasteners: Steel drill screws or nails, in lengths recommended by sheathing manufacturer for thickness of sheathing board to be attached, with organic-polymer or other corrosion-protective coating.
B. Applied Exterior Finish Systems (DEFS) is applied per the manufacturer’s specifications.

Part 3-Execution

3.1 GYPSUM SHEATHING INSTALLATION
A. Comply with GA-253, ASTM C1280 and manufacturer’s written instructions.
B. Install CertainTeed GlasRoc Sheathing with polymer coated side (logo side) out. Boards are also printed with “This side out” on the face side.
C. Cut boards at penetrations, edges, and other obstructions of work; fit tightly against abutting construction, unless otherwise indicated.
   1. Install boards with a 3/8-inch (10 mm) setback where non-load-bearing construction abuts structural elements.
   2. Install boards with a 1/4-inch (6 mm) setback where they abut masonry or similar materials that might retain moisture, to prevent wicking.
   3. Allow no joints greater than 1/8 inch (3 mm).

D. Coordinate sheathing installation with flashing and joint-sealant installation so that these materials are installed in sequence and manner that prevents exterior moisture from passing through completed exterior wall assembly.
E. Apply fasteners so screw heads bear tightly against face of sheathing boards but do not cut into facing.
F. Do not bridge building expansion joints with sheathing; cut and space edges to match spacing of structural support elements.
G. Horizontal installation: Install sheathing with long edges in contact with edges of adjacent boards without forcing. Butt ends of boards over centers of stud flanges, and stagger end joints of adjacent boards not less than one stud spacing.

3.2 SHEATHING JOINT-AND-PENETRATION TREATMENT
A. Seal sheathing joints, as required, according to sheathing manufacturer’s written recommendations.
   1. If a weather seal is required before the application of a water-resistive barrier, apply silicone emulsion sealant on joints and trowel flat. Apply sufficient quantity of sealant to completely cover joints after troweling. Seal other penetrations and openings. Check with the water-resistive barrier manufacturer for installation instructions prior to the application of sealant.
   2. When the codes allow the application as an alternate to separate water-resistive barrier - Apply glass-fiber mesh tape to fiberglass reinforced gypsum sheathing board joints, and apply and install silicone emulsion sealant to embed sealant in entire face of tape. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.
B. Water-Resistive Barrier:
   1. Consult building code authority having jurisdiction for requirements regarding water-resistive barrier installation, if necessary.
   2. GlasRoc Sheathing has received Acceptance Letters from multiple manufacturers of air/ water barrier systems.
   3. GlasRoc Sheathing is a compatible substrate for air/water barrier systems tested in accordance with CAN/ULC-S741.

3.3 Ceilings and Soffits
A. Finishing is accomplished with one of the following methods:
   1. Direct-Applied Exterior Finish System (DEFs) is applied per the manufacturer’s specifications.
   2. Apply nominal 2 inch (50 mm) wide glass mesh drywall tape and 90 minute, setting-type joint compound on the board joints. Skim coat the entire surface with a setting-type compound, prime and paint with good quality exterior grade primer and paint per the manufacturer’s recommendations.
GlasRoc® Sheathing featuring patented* Embedded Glass Reinforced Gypsum™ technology is strong, yet flexible enough to bend to curved surfaces like the towers at The Avenue at Westchase.

Project (pictured above): The Avenue at Westchase
Project Type: Mixed-use Commercial Development
Location: Westchase Village, Tampa, FL
Application: Exterior Insulating Finishing System (EIFS)
Square Footage: 80,000 sq. ft.
Architect: Nathan Griffes, Cuhaci & Peterson Architects

* Covered by U.S. Patent No. 6,524,679; 6,878,321;6,866,492, and other patents pending.
