**Product Description**

CertainTeed Wall and Ceiling Spray Textures provide a decorative appearance over gypsum panels and most other interior wall and ceiling surfaces. They are formulated to provide for a variety of decorative options including splatter, knockdown and orange peel designs.

**Wall & Ceiling Texture - RED (powder)**
- Unaggregated interior wall and ceiling spray texture
- Suitable for all texture patterns
- Harder and more durable finish
- Excellent coverage

**Wall & Ceiling Texture - BLUE (powder)**
- Available in both original and tinted formulas for white and beige finish
- Unaggregated interior wall and ceiling spray texture
- Light to medium texture patterns
- Easy lump free mixing
- Good mileage

**Medium-Tex (powder)**
- Perlite aggregate based
- Bright white medium texture finish
- Good hiding characteristic

**Easi-Tex™ (ready-mixed)**
- Pre-mixed unaggregated interior wall and ceiling spray texture
- Suitable for all spray patterns and equipment
- Dust free pre-mixed product
- Harder and more durable finish

**Product Data**

**Material:** Powder or Ready-Mixed

**Color:** Off-white and Beige

**Packaging:**
- **Powder:** 50 lb (22.6 kg) bag
- **33 lb (15 kg) bag**
- **Ready-Mix:** 48 lb (21.8 kg) carton

**Coverage:** Approximately 500 ft² per package, depending upon the type of pattern, the condition of the substrate, and the application technique.

**Shelf life:** Ready-Mix – 9 months when stored properly.
- Powders – 24 months from production code date, when stored properly.
- 12 months for Medium-Tex.

**Drying time:** 24 hours in normal conditions.

**Storage:** Wall and Ceiling Textures should be stored in a dry, temperate location where there can be no contact with moisture. Rotate stock. Opened bags should be closed tightly before storage. Protect Ready-Mixed textures from freezing.

**Technical references:**
- GA-214: Gypsum Association publication “Levels of Gypsum Board Finish.”
- GA-216: Gypsum Association publication “Recommended Specifications for the Application and Finishing of Gypsum Board.”

**Working with the Product**

**Site conditions**
The room temperature and wallboard should be maintained at 55°F (13°C) for 48 hours prior to application and continuously thereafter until completely dry. Continuous ventilation must be provided to ensure proper drying. When using temporary heating, care should be taken to avoid overheating and high humidity conditions.

**Surface preparation**
Ensure that surfaces to be decorated are thoroughly dry and free of dirt, oils, mildew and other contaminents.

**Priming**
All surfaces to be textured should be primed with texture primer prior to application to ensure uniform porosity and texture. Primer should be dry prior to applying texture. Adhere to all manufacturers’ specific directions for painting and decorating materials.

Products Specified:
Mixing (powder)
Use a clean vessel equipped with powder agitator. For initial mix, stir powder into recommended amount of water, agitating during powder addition. Allow to soak for at least 15 minutes — longer in cold water. Remix until a creamy, lump-free mix is obtained. Adjust to spray consistency by adding small amounts of water, if necessary. Over thinning can create an undesirable finish or “soft wall” or chalky condition. Over dilution can also entrain excessive air and foam. **Note that the air and mix temperature will affect viscosity.**

Mixing (ready mix)
Prethinning may be necessary; the amount of water added will determine the type of texture achieved.

**Application**
Texture should not be applied until the primer coat is thoroughly dry. Products are specifically designed for hand and spray applications. The desired pattern can be achieved by varying the viscosity of the mix, the orifice opening at the spray tip, or the air supply pressure.

Decorating
This product can be painted after drying. Adhere to all manufacturers’ specific directions for painting and decorating materials.

**Limitations**
Application below grade or in high-humidity areas is not recommended. May contribute to sagging of gypsum board ceilings in humid conditions. The potential for sagging can be minimized by taking the following precautions:

- Use Interior Ceiling board or gypsum board applied perpendicular to the framing at the proper spacing recommendation for the board thickness (see GA-216, Tables 1 and 4.)
- Excessive amounts of insulation should not be added without additional support (GA-216, Table 2). Where the gypsum board supports ceiling insulation and is finished with a water-based texture material, either spray or hand applied, only 5/8” (15.9 mm) gypsum board, or 1/2” (12.7 mm) gypsum ceiling board, application perpendicular to the framing members shall be used.
- The relative humidity should be controlled by providing adequate ventilation before, during and after gypsum board and finish application.
- Temperatures should be maintained between 55°F and 70°F (13°C and 21°C). Gypsum board should be thoroughly dry and at ambient temperature before application.
- Joint treatment should be thoroughly dry before applying any decoration.
- Individual coats of primer and paint shall be dry before the application of successive coats.
- Where the gypsum board supports ceiling insulation and is finished with a water-based texture material, either spray or hand applied, only 5/8” (15.9 mm) gypsum board or 1/2” (12.7 mm) gypsum ceiling board, application perpendicular to the framing members shall be used.
- Texture is not washable unless painted.

**SDS**

**Warning**
Dust generated from sanding product may cause eye, skin, nose, throat or respiratory irritation. Use wet-sanding to avoid creating dust. Avoid inhalation of dust and eye contact. Product contains silica. Inhalation of respirable silica dust can cause silicosis, a potentially disabling lung disease, known to cause lung cancer. When sanding, drilling or abrading product during installation or handling: (1) Ensure adequate ventilation. (2) Wear a dust mask or, if dust may exceed PEL, use NIOSH/MSHA approved respirator. (3) Warn others in area. (4) Wear eye protection. If eye contact occurs, flush with lukewarm, gently flowing water for 5 minutes or until particle/dust is removed.

For further information, refer to Material Safety Data Sheet or consult manufacturer by calling 1-800-327-7455.

**KEEP OUT OF REACH OF CHILDREN.**

**Warranty**
Since methods and condition of application such as temperature, humidity and over thinning are beyond our control, CertainTeed Gypsum, Inc. (CertainTeed) will not be responsible for the failure of this Product when the Product is not used according to directions and specifications and accepted standards of procedure inherent in drywall application; or when reasonable allowance is not made by the user for adverse weather and job conditions. However, if this product proves to be defective, maximum liability shall be limited to replacement of the material only or refund of the purchase price. This shall be the full limit whatsoever of CertainTeed’s liability. All claims shall be submitted in writing to CertainTeed within thirty days from the date of discovery. Provincial or Federal laws may provide rights in addition to this warranty that cannot be modified or excluded.
