UL Evaluation Report

UL ER3660-01

Issued: August 30, 2013

UL Category Code: ULFP

CSI MasterFormat®

DIVISION: 09 00 00 - FINISHES
Sub-level 2: 09 20 00 – Plaster and Gypsum Board
Sub-level 3: 09 21 00 – Plaster and Gypsum Board Assemblies
Sub-level 4: 09 21 16 – Gypsum Board Assemblies

Sub-level 3: 09 29 00 – Gypsum Board
Sub-level 4: 09 29 82 – Gypsum Board Fireproofing

COMPANY:

Certainteed Gypsum, Inc.
4300 West Cypress Street, Suite 500
Tampa, FL 33607

Pamela.Shinkoda@saint-gobain.com

1. SUBJECT:

GlasRoc® Sheathing and GlasRoc®Sheathing Type X. GlasRoc Sheathing is also referred to as GlasRoc® or EGRG, when provided in a 1/2 inch thickness. GlasRoc Sheathing Type X is also referred to as GlasRoc® or EGRG when provided in a 5/8 inch thickness.

For the purpose of this report, the products will be referred to as GlasRoc® Sheathing to represent the ½ inch thick product, and GlasRoc® Sheathing Type X to represent the 5/8 inch thick product.

2. SCOPE OF EVALUATION

Compliance with the following codes:

- 2012 International Green Construction Code (IgCC)
The products were evaluated for the following properties:

- Physical properties
- Structural
- Surface Burning Characteristics
- Noncombustibility
- Fire-resistance-rated construction

3. REFERENCED DOCUMENTS

- ANSI/UL 263 (ASTM E 119), Fire Tests of Building Construction and Materials
- ANSI/UL 723 (ASTM E 84), Test for Surface Burning Characteristics of Building Materials
- ASTM C 1177 Standard Specification for Glass Mat Gypsum Substrate for use as Sheathing

4. USES

GlasRoc® Sheathing and GlasRoc® Sheathing Type X are used as exterior wall sheathing and as exterior soffit board complying with ASTM C 1177 as specified in Table 2506.2 of the IBC or Section R702.3.1 of the IRC, as applicable. The sheathing is intended for use as solid sheathing behind a variety of exterior wall cladding materials on buildings of all construction types under the IBC and buildings under the IRC. The sheathing may be used to resist transverse wind loads when installed in accordance with Section 6.2.1 and racking loads due to wind and seismic forces when installed in accordance with Section 6.2.2. GlasRoc® Sheathing Type X may be used as a component of a fire-resistance-rated wall assembly when installed in accordance with Section 6.3.

5. PRODUCT DESCRIPTION

5.1 General:

GlasRoc® Sheathing and GlasRoc® Sheathing Type X are glass mat gypsum substrates with water-resistant cores and surfaces and embedded glass mats beneath the surface of each face. The exterior face is coated with a polymer coating. GlasRoc® Sheathing and GlasRoc® Sheathing Type X are manufactured to conform to physical property requirements specified in Section 5 of ASTM C 1177.

GlasRoc® Sheathing and GlasRoc® Sheathing Type X have flame spread indices of 25 or less when tested in accordance with ANSI/UL 723 (ASTM E 84) and are classified as noncombustible building materials in accordance with ASTM E 136.

To verify the amount of recycled content that GlasRoc® Sheathing and GlasRoc® Sheathing Type X contribute to Section 505.2.2 of 2012 International Green Construction Code (IgCC), please refer to UL’s Sustainable Products Database for these products. These products also comply with Section 806.5 of the 2012 IgCC for acoustical ceiling tiles and wall systems and A108.5 Total VOC limit project elective. Refer to UL’s GREENGUARD certification of these products.
5.2 GlasRoc® Sheathing:
GlasRoc® Sheathing is 1/2 inch (12.7 mm) thick, 48 (1219 mm) inches wide, and is available in lengths of 96, 108, and 120 inches (2438, 2743, and 3048 mm).

5.3 GlasRoc® Sheathing Type X:
GlasRoc® Sheathing Type X is 5/8 inch (15.9 mm) thick, 48 inches (1219 mm) wide, and is available in lengths of 96, 108, and 120 inches (2438, 2743, and 3048 mm).

6. INSTALLATION

6.1 General:
GlasRoc® Sheathing and GlasRoc® Sheathing Type X must be installed in accordance with ASTM C 1280, Standard Specification for Application of Gypsum Sheathing, as described in Section 2508.2 of the IBC or Section R702.3.5 of the IRC, the manufacturer’s published installation instructions, and this report. A copy of the installation instructions must be available at all times on the jobsite during installation.

When installed on exterior walls, the sheathing must be covered with an approved water-resistive barrier in accordance with Section 1404.2 of the IBC, or Section 703.2 of the IRC, and an approved exterior wall covering. The sheathing must not be used as a nailing base, and any mechanical attachments of exterior coverings must be made directly to the framing. All fasteners must be driven so that the heads are at or slightly below the surface of the sheathing without fracturing the core.

6.2 Structural Design:

6.2.1 Transverse Wind Resistance: GlasRoc® Sheathing and GlasRoc® Sheathing Type X may be used to resist transverse wind loads when installed as described in Tables 1 and 2. Design wind loads are determined in accordance with Section 1609 of the IBC and/or Section 703.1.2 of the 2012 and 2009 IRC, as applicable. The design winds loads must not exceed the allowable transverse wind loads shown in Tables 1 and 2.

6.2.2 Shear Resistance: GlasRoc® Sheathing and GlasRoc® Sheathing Type X may be used as components of conventional light-framed walls for resisting shear loads in accordance with Section 2505 of the IBC and as described in Sections 6.2.2.1 and 6.2.2.2.

6.2.2.1 Prescriptive Wall Bracing: GlasRoc® substrate is equivalent to gypsum sheathing for use as bracing to resist lateral loads due to wind and seismic forces. When installed as prescribed by code for gypsum sheathing, the glass mat gypsum substrate may be used as wall bracing in accordance with IBC Section 2308.9.3, Method 5, subject to limitations in Section 2308.2, or in accordance with Section R602.10.4, Method GB of the 2012 IRC, Section R602.10.2, Method GB of the 2009 IRC or Section R602.10.3, Method 5 of the 2006 IRC, as applicable.

6.2.2.2 Engineered Shear Walls: GlasRoc® substrate may be used as a component of engineered shear walls when designed in accordance with Section 2305 of the IBC for wood framed walls or Section 2211.6 of the 2012 IBC, Section 2210.6 of the 2009 IBC, or Section 2210.5 of the 2006 IBC, as applicable, for light steel framed walls. The design wind and seismic loads must not exceed the allowable racking shear capacity for gypsum sheathing shown in Table 2306.3(3) of the 2012 IBC, Table 2306.7 of the 2009 IBC or Table 2306.4.5 of the 2006 IBC. Design and wind load must be determined in accordance with Section 1609 of the IBC. Design seismic loads must be determined in accordance with Section 1613 of the IBC.

Structural members, systems and components, including boundary studs and plates, must be anchored to resist design forces and to provide continuous load paths for these forces to the foundation.
6.3 Load-bearing Fire-resistance-rated Wall Assemblies:

5/8 inch (15.9 mm) thick GlasRoc® Sheathing Type X has been evaluated for fire resistance when used as a part of UL Fire Resistance Design Nos. U301, U302, U305, U309, U326, U329, U330, U332, U337, U338, U339, U341, U342, U344, U354, U355, U356, U357, U358, U360, U376, U391, U418, U425, U434, U460, U473, U485, U487, and V304.

Refer to the UL Fire Resistance Certification information for UL File R3660 (CKNX Link) for applicable design coverage and details. Fire resistance ratings are only applicable when the assemblies are constructed in accordance with the published design.

6.4 Thermal Barrier:

GlasRoc® Sheathing and GlasRoc® Sheathing Type X may be used as a thermal barrier for foam plastic insulation in accordance with Section 2603.4 of the IBC or Section 316.4 of the IRC when installed in accordance with Section 6.1.

7. CONDITIONS OF USE

GlasRoc® Sheathing and GlasRoc® Sheathing Type X as described in this report, comply with, or are suitable alternatives to what is specified in, those codes listed in Section 2.0 of this report, subject to the following conditions:

7.1 The products must be manufactured, identified, and installed in accordance with this report, the manufacturer’s published installation instructions and the applicable code. If there is a conflict between the manufacturers published installation instructions and this report, this report governs.

7.2 When the products described in this report are not installed as an engineered shear wall, as described in Section 6.2.2, the stud walls must be braced by other materials in accordance with the applicable code.

7.3 Shear walls using these materials must not be used to resist forces imposed by masonry and/or concrete walls.

7.4 See UL Online Certifications Directory for products evaluated as a part of fire-resistance-rated assemblies in accordance with UL 263, Gypsum Board (CKNX Link).

7.5 See UL Online Certifications Directory for products evaluated for flame spread in accordance with UL 723, Gypsum Board (BWFR Link).

7.6 GlasRoc® Sheathing and GlasRoc® Sheathing Type X is manufactured by CertainTeed Gypsum & Ceiling Manufacturing, Inc., located in Cody, WY, under the UL LLC Classification and Follow-Up Service Program, which includes audits in accordance with the quality elements of ICC-ES Acceptance Criteria for Quality Documentation, AC10.
8. SUPPORTING EVIDENCE

8.1 Manufacturer’s product literature and quality documentation.

8.2 UL Classification reports in accordance with UL 263 (ASTM E 119). See UL Product Certification Categories, Gypsum Board (CKNX Link).

8.3 UL Classification reports in accordance with UL 723 (ASTM E 84) and ASTM E 136. See UL Product Certification Categories, Gypsum Board (BWFR Link).

8.4 Reports of physical property testing in accordance with ASTM C 473, for compliance with ASTM C 1177.

8.5 Reports of transverse load tests in accordance with ASTM E 330.

8.6 Documentation of quality system elements described in AC10.

9. IDENTIFICATION

GlasRoc® Sheathing and GlasRoc® Sheathing Type X (alternatively labeled as GlasRoc® or EGRG), as described in this evaluation report, are identified by a marking bearing the report holder’s name (CertainTeed Gypsum, Inc.), the plant identification, the product designation, the UL Classification Mark, and the evaluation report number UL ER3660-01. The validity of the evaluation report is contingent upon this identification appearing on the product or UL Classification Mark certificate.

10. USE OF UL EVALUATION REPORT

10.1 The approval of building products, materials or systems is under the responsibility of the applicable authorities having jurisdiction.

10.2 UL Evaluation Reports shall not be used in any manner that implies an endorsement of the product, material or system by UL.

10.3 The current status of this report, as well as a complete directory of UL Evaluation Reports may be found at UL.com via our Online Certifications Directory: www.ul.com/erdirectory

This UL Evaluation Report is not an endorsement or recommendation for use of the subject and/or product described herein. This report is not the UL Listing or UL Classification Report that covers the subject product. The subject product’s UL Listing or UL Classification is covered under a separate UL Report. UL disclaims all representations and warranties whether express or implied, with respect to this report and the subject or product described herein. Contents of this report may be based on data that has been generated by laboratories other than UL that are accredited as complying with ISO/IEC Standard 17025 by the International Accreditation Service (IAS) or by any other accreditation body that is a signatory to the International Laboratory Accreditation Cooperation (ILAC) Mutual Recognition Arrangement (MRA). The scope of the laboratory’s accreditation shall include the specific type of testing covered in the test report. As the accuracy of any non-UL data is the responsibility of the accredited laboratory, UL does not accept responsibility for the accuracy of this data.

For SI: 1 inch = 25.4 mm
1 pound per lineal foot (plf) = 14.6 N/m
1 pound per square foot (psf) = 48 Pa

1 The sheathing is installed with the long dimension either parallel or perpendicular to the studs.
2 All ends and edges of sheathing must be supported by framing members, except where edges or ends are perpendicular to studs.
3 The nails and screws must have a minimum edge distance of 3/8 inch (9.5 mm).
4 Wall studs are nominally 2-by-4 No. 1 grade Douglas-fir-larch with a minimum specific gravity of 0.50.
5 Allowable values are for short-term wind loads.
6 Wood stud walls sheathed with GlasRoc® Sheathing or GlasRoc® Sheathing Type X must not be used to resist horizontal loads from concrete or masonry walls.
7 For properties of the roofing nails, refer to ASTM F 1667.
8 When used in fire-resistance-rated wall assemblies in accordance with Section 6.3, all parameters of the fire rated design must be met.
