FLINTLASTIC® ULTRA GLASS SA
PREMIUM SBS MODIFIED BITUMEN SELF-ADHERING FIBERGLASS
BASE SHEET FOR HOT/COLD ASPHALT AND TORCH APPLICATIONS

**Product Use:** Flintlastic® Ultra Glass SA is designed for use as a base ply for modified bitumen roofing systems. It is suitable for use in the construction of various types of membranes for both new construction and reroofing over a variety of substrates. Flintlastic Ultra Glass SA will provide additional strength, improved handling, pliability and moisture resistance when used as the first ply over non-nailable and insulated substrates.

**Limitations:** Flintlastic Ultra Glass SA is attached by a self-adhering method. It is not intended for attachment with hot asphalt, torch, cold adhesive, coal tar pitch or mechanical fasteners. Rolls should be stored upright off the ground and completely protected from the weather. Roof decks must be structurally sound, dry, smooth and meet or exceed minimum requirements of the deck manufacturer, local code and CertainTeed. Flintlastic Ultra Glass SA is a self-adhering base ply featuring a peel-off backing.

**Product Composition and Features:** Flintlastic Ultra Glass SA is manufactured on a heavy duty fiberglass reinforced mat that receives a coating of SBS modified bitumen compound and is surfaced with fine mineral particles. The fiberglass mat provides uniform strength and moisture resistance. Flintlastic Ultra Glass SA modified bitumen compound provides increased durability with improved pliability and high-tack characteristics for smoother, more uniform applications without the need of adhesives or hot asphalt.

**Roll Dimensions:** 39¾" x 33' 11"
**Nominal Coverage:** One square
**Approximate Weight:** 72 lbs. per roll
**Surfacing:** Fine black mineral particles

**Applicable Standards:** Meets ASTM D1970 and D6163, Grade S, Type I. Flintlastic Ultra Glass SA is approved by Underwriters Laboratories for use in various Class A, B and C roof assemblies, Factory Mutual, Florida Building Code Statewide Approval (FL 2533 and FL 16709) and Texas Department of Insurance (RC-47).

**Packaging:** Flintlastic Ultra Glass SA rolls are individually packaged in corrugated boxes.

The following information represents typical average properties of Flintlastic Ultra Glass SA.

**Modified Bitumen Coating:** Non-oxidized (flux) asphalt, blended with a compatible elastomeric styrene-butadiene-styrene polymer and selected inert fillers.

**Support Mat:** Heavy duty fiberglass reinforced mat.

*NOTE: Published results are nominal production values confirmed by independent laboratory testing.*
Roof systems constructed with Flintlastic Ultra Glass SA as the base ply must be applied in accordance with installation procedures contained in the CertainTeed Commercial Roof Systems Specifications. The following information is intended for general information purposes only and is not all-inclusive.

**Preparation:** Substrates to receive a roof system must be firmly attached, smooth, dry, clean and free of sharp projections and depressions. Flashing details must be in place, ready to receive roofing with roof accessories available prior to application of materials. Substrates requiring priming must be primed with asphalt primer such as FlintPrime® and be allowed to completely dry. Substrates must provide positive drainage. Roof insulation must be tapered to drains.

**Installation:** Flintlastic Ultra Glass SA must be installed with 4” side laps and 6” end laps, with end laps diagonally staggered not less than 3’ apart. Flintlastic Ultra Glass SA must be applied to a clean, non-nailable substrate by peeling off the siliconized backer that exposes a specially formulated SBS high-tack self adhesive surface, that is normally heat activated by the sun. Therefore, on hot sunny days, adhesion occurs quickly. In addition, mopping or torching a finished membrane to the base enhances the adhesive’s bite and set.

**Precautions:** Cold weather applications require special handling to prevent damage to the rolls and ensure satisfactory installation. Do not apply roofing systems over improperly prepared substrates or substrates that contain moisture. Self-adhered membranes can act as a vapor barrier, it is the sole responsibility of the architect, contractor and owner to ensure adequate and appropriate substrate and roof system ventilation.

**Maintenance:** CertainTeed Commercial Roof Systems do not require any additional maintenance beyond normal roof maintenance procedures. CertainTeed recommends regular roof maintenance and inspection to determine the condition of drains, flashings and other similar items, and to prolong the life expectancy of the roof system.

**Warranties**
CertainTeed offers Limited (product only) and No Dollar Limit (NDL, product and workmanship) warranties. Warranty type and duration is dependent on roof system configuration and contractor selection. Only CertainTeed Gold and Silver Star Contractors are eligible to apply for NDL warranties on specific roof projects. For more information, see CertainTeed Commercial Roof Systems Specifications or contact Commercial Roofing Technical Services.

**Technical Assistance and Services**
CertainTeed provides technical assistance in the design, selection, specification and application guidelines of CertainTeed Commercial Roof Systems. Architectural and field representatives are available for consultation within each region. For more information, contact CertainTeed Commercial Roofing Technical Services at 800-396-8134 x2.

**Caution:**

**Fire Hazard**
Torch-down application of this product may create a risk of fire, including smoldering fires. The roofing applicator is solely responsible for ensuring and enforcing safe and proper application of CertainTeed products by competent and qualified personnel. Only properly trained roofing professionals are authorized to install this product.

Never apply flame directly to combustible materials or allow the flame to enter into hidden or protected areas that may contain combustible materials. Follow all local code requirements. Have a Class A-B-C fire extinguisher available to each applicator. Thoroughly inspect the job site whenever torching equipment has been used. Be certain that all chances of a fire have been eliminated.

Refer to the CertainTeed Commercial Roof Systems Specifications, Midwestern Roofing Contractors Association (MRCA) CERTA program, National LP Gas Association, National Roofing Contractors Association (NRCA), National Fire Protection Association (NFPA), and Asphalt Roofing Manufacturers Association (ARMA) for further information and safety recommendations.
