EVALUATION SUBJECT:
CERTAINTEED CEDAR IMPRESSIONS® POLYMER SHAKE AND SHINGLE SIDING

1.0 EVALUATION SCOPE

1.1 Compliance with the following codes:
- 2015 and 2012 International Residential Code® (IRC)

Properties evaluated:
- Exterior veneer
- Wind load resistance—transverse

1.2 Evaluation to the following green code(s) and/or standards:
- 2016 California Green Building Standards Code (CALGreen), Title 24, Part 11

Attributes verified:
- See Section 3.1

2.0 USES

CertainTeed Cedar Impressions® Polymer Shake and Shingle Sidings are used as exterior wall coverings on buildings of Type VB construction in jurisdictions adopting the IBC and structures constructed in accordance with the IRC, over approved sheathings capable of supporting the imposed loads, including but not limited to positive and negative transverse wind loads.

3.0 DESCRIPTION

3.1 Siding:

The Cedar Impressions® Polymer Shake and Shingle sidings are molded into siding panels or individual shingles from polypropylene (PP) resins. The siding panels and individual shingles conform to, and are certified and labeled in accordance with, ASTM D7254. The accessory items, used to detail the application of the product as an exterior wall covering, are of the same material except for the starter strips, which are steel and aluminum.

All siding panels and individual shingles have an upper nailing flange with 1-inch-by-1/16-inch (25.4 mm by 4.8 mm) elongated nail slots spaced 1 1/2 inches (38.1 mm) on center and a lower locking leg that hooks into the upper edge of the lower course. The nailing flange has a 1/8-inch (3.2 mm) nail hole at the center of the panel. All panels also have side lock tabs.

The siding panels and individual shingles are available in different colors with varying shingle shapes and wood-grain textures. Siding panels and individual shingles range in nominal nail flange thickness from 0.090 inch to 0.125 inch (2.3 mm to 3.2 mm). The siding panels have lengths of 32 inches to 73 1/2 inches (813 mm to 1867 mm). The individual shingles have lengths of 4 inches to 8 inches (102 mm to 203 mm). The accessory shapes include inside/outside corners, cornice moldings, receivers and starter strips. Refer to Table 1 and Figure 1 for panel thicknesses, lengths and profiles within the scope of this report.

Cedar Impressions® Polymer Shake and Shingle siding products have a flame-spread index of 200 or less when tested in accordance with ASTM E84 and Section 1404.12.1 of the IBC.

The attributes of the siding panels have been verified as conforming to the provisions of (i) CALGreen Sections A4.405.1.3 (prefinished materials) and A5.406.1.2 (reduced maintenance); (ii) ICC 700-2015 and ICC 700-2012 Sections 601.7, 11.601.7, and 12.1(A),601.7 (site-applied finishing materials); and (iii) ICC 700-2008 Section 601.7 (site-applied finishing materials). Note that decisions on compliance for those areas rest with the user of this report. The user is advised of the project-specific provisions that may be contingent upon meeting specific conditions, and the verification of those conditions is outside the scope of this report. The code may provide supplemental information as guidance.

3.2 Sheathing Substrate:
- Solid plywood structural sheathing complying with DOC PS-1.
- 7/10-inch or 1/2-inch (11.1 mm or 12.7 mm) Exposure 1 oriented strand board (OSB) sheathing complying with DOC PS-2.

3.3 Fasteners:
Siding panels and individual shingles must be attached to sheathing with galvanized, aluminum or stainless steel roofing nails with lengths of 1 1/2 inches or 1 5/8 inches (38 mm or 41 mm), a steel shank diameter of 1/8 inch (3.18 mm), and a 3/8-inch- or 7/16-inch-diameter (9.5 mm or 11.1 mm) head.

4.0 INSTALLATION

4.1 General:
Cedar Impressions® Polymer Shake and Shingle siding must be installed in accordance with the manufacturer’s published installation instructions, the applicable code and this report. The manufacturer’s published installation instructions and this report must be strictly adhered to, and a copy of the instructions must be available on the jobsite at all times during installation.

The siding panel must be installed over the sheathing substrate in accordance with the applicable code. The siding panel and accessories must be fastened to framing having a minimum specific gravity of 0.42, or structural sheathing, with roofing nails with a minimum embedment into framing of 3/4 inch (19.1 mm). When fastening to structural sheathing, nail penetration must be at least 3/4 inch (19.1 mm) beyond the backside of the sheathing. Accessory materials such as corners, starter strips and trim must be fastened in accordance with the manufacturer’s instructions, with the starter strip fastened similar to the siding panel.

4.2 Wind Resistance:
The allowable negative wind pressures for the products shown in Table 1 must exceed the design negative wind pressures determined in accordance with Chapter 16 of the IBC or Section R301.2.1 of the IRC.

The siding panel must be installed only on exterior walls covered by a solid sheathing capable of supporting the imposed loads, including but not limited to positive and negative transverse wind loads.

5.0 CONDITIONS OF USE
The CertainTeed Cedar Impressions® Polymer Shake & Shingle Siding described in this report complies with, or is a suitable alternative to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Installation must comply with this report, the manufacturer’s published instructions and the applicable code. In the event of a conflict between the manufacturer’s published installation instructions and this report, this report governs.

5.2 The siding is limited to the design pressures shown in Table 1. In jurisdictions adopting the IRC, the siding must be installed in accordance with IRC Table R703.4 and limited to areas where the design wind pressure does not exceed the design values shown in Table 1.

5.3 The siding is limited to use on construction Type VB (IBC) and to structures constructed in accordance with the IRC.

5.4 Under Section 1404.12.2 of the IBC, the fire separation distance between the building with the siding and adjacent buildings must be no less than 10 feet (3048 mm).

5.5 The exterior walls must be braced or sheathed to resist racking loads with approved materials in accordance with the requirements of the applicable building code.

5.6 The sheathing must be covered with a water-resistant barrier, as required by the applicable code.

5.7 The CertainTeed Cedar Impressions® Polymer Shake & Shingle Siding is manufactured in McPherson, Kansas, under a quality control program with inspections by ICC-ES.

6.0 EVIDENCE SUBMITTED
Data in accordance with the ICC-ES Acceptance Criteria for Polypropylene Siding (AC366), dated January 2015.

7.0 IDENTIFICATION
The siding panels and shingles described in this report are identified by a stamp bearing the manufacturer's name (CertainTeed Corporation), the product name and code, the statement “Conforms to ASTM Specification D7254,” and the evaluation report number (ESR-3085).

For SI: 1 inch = 25.4 mm

**NOTES:**

\(^1\)Allowable loads as determined per A1.2.1 of ASTM D7254.

\(^2\)Individual 5-inch Sawmill Shingles are available in 4-inch, 4\(\frac{1}{4}\)-inch, 5-inch, 5\(\frac{3}{4}\)-inch, 6\(\frac{1}{4}\)-inch and 8-inch lengths.

\(^3\)Individual 5-inch Sawmill Shingles fasteners are spaced \(\frac{3}{4}\) inch from each shingle edge.

EVALUATION SUBJECT:
CERTAINEED CEDAR IMPRESSIONS® POLYMER SHAKE AND SHINGLE SIDING

1.0 REPORT PURPOSE AND SCOPE

Purpose:
The purpose of this evaluation report supplement is to indicate that CertainTeed Cedar Impressions® Polymer Shake and Shingle Sidings, recognized in ICC-ES master evaluation report ESR-3085, have also been evaluated for compliance with the codes noted below.

Applicable code editions:
- 2016 California Building Code® (CBC)
- 2016 California Residential Code® (CRC)

2.0 CONCLUSIONS

2.1 CBC:
The CertainTeed Cedar Impressions® Polymer Shake and Shingle Sidings, described in Sections 2.0 through 7.0 of the master evaluation report ESR-3085, comply with CBC Chapter 14, provided the design and installation are in accordance with the 2015 International Building Code® (IBC) provisions noted in the master report and the applicable provisions of the CBC.

The products recognized in this supplement have not been evaluated under CBC Chapter 7A for use in the exterior design and construction of new buildings located in any Fire Hazard Severity Zone within State Responsibility Areas or any Wildland–Urban Interface Fire Area.

2.2 CRC:
The CertainTeed Cedar Impressions® Polymer Shake and Shingle Sidings, described in Sections 2.0 through 7.0 of the master evaluation report ESR-3085, comply with CRC Chapter 7, provided the design and installation are in accordance with the 2015 International Residential Code® (IRC) provisions noted in the master report and the additional requirements of the CRC.

The products recognized in this supplement have not been evaluated under CRC Section R327 for use in the exterior design and construction of new buildings located in any Fire Hazard Severity Zone within State Responsibility Areas or any Wildland–Urban Interface Fire Area.

The products recognized in this supplement have not been evaluated for compliance with the International Wildland–Urban Interface Code®.

This supplement expires concurrently with the master report, reissued August 2017.

CERTAINTEED CEDAR IMPRESSIONS® POLYMER SHAKE AND SHINGLE SIDING

1.0 REPORT PURPOSE AND SCOPE
Purpose:
The purpose of this evaluation report supplement is to indicate that CertainTeed Cedar Impressions® Polymer Shake and Shingle Sidings, recognized in ICC-ES master evaluation report ESR-3085, have also been evaluated for compliance with the codes noted below.

Applicable code editions:
- 2017 Florida Building Code—Building
- 2017 Florida Building Code—Residential

2.0 CONCLUSIONS
The CertainTeed Cedar Impressions® Polymer Shake and Shingle Sidings, described in Sections 2.0 through 7.0 of the master evaluation report ESR-3085, comply with the Florida Building Code—Building and Florida Building Code—Residential, provided the design and installation are in accordance with the International Building Code® (IBC) provisions noted in the master report.

Use of the CertainTeed Cedar Impressions® Polymer Shake and Shingle Sidings for compliance with the High-Velocity Hurricane Zone provisions of the Florida Building Code—Building and Florida Building Code—Residential has not been evaluated, and is outside the scope of this supplemental report.

For products falling under Florida Rule 9N-3, verification that the report holder’s quality assurance program is audited by a quality assurance entity approved by the Florida Building Commission for the type of inspections being conducted is the responsibility of an approved validation entity (or the code official when the report holder does not possess an approval by the Commission).

This supplement expires concurrently with the master report, reissued August 2017.
