SMARTFLASH® ONE
ONE-PART LIQUID APPLIED FLASHING & REPAIR RESIN

Product Use: SmartFlash® ONE is a one-part seamless, durable, liquid-applied polyurethane bitumen waterproofing resin. It is designed for flashing new or existing penetrations and construction details within low-slope modified bitumen and/or built-up-roofing (BUR) roof systems. SmartFlash ONE is also a durable, long-term repair solution for flashings or cracks within a steep slope asphalt shingle roof.

Precautions: SmartFlash ONE may be applied when the ambient temperature is 40°F-95°F (5°C - 35°C). Refer to SmartFlash ONE Safety Data Sheet (SDS) before handling.

Product Composition and Features: A seamless, monolithic flashing is created in the field by combining the SmartFlash ONE polyurethane bitumen resin with SmartFlash polyester reinforcement fabric. Unused resin may be stored for future use.

1Assumes three layers, 30 wet mils per layer

Storage: Store containers in a cool, well-ventilated area, out of direct sunlight and away from humidity, heat and ignition sources. Store in temperature range of 32-95°F (0 to 35°C). Keep storage areas clear of combustible materials. No smoking near storage area. Tightly seal all partially used containers. Product shelf life is one year.

Test Description | Test Method | Results
--- | --- | ---
Peak Load, psi (MPa) | ASTM D412 | 368 (2.5)
Elongation at Peak Load, % | ASTM D412 | 67.2
Tear Resistance, lbf | ASTM D903 | 23.0
Water Vapor Transmission, perms | ASTM D1653 | 11
Shore A Hardness | ASTM D2240 | 74
Low Temperature Flexibility, °F (°C) | ASTM D5147 | -15 (-26)

*Data is represented by average values, unless noted otherwise

Product Application:
- Wear protective latex gloves during application. Resin adheres to skin and is difficult to remove.
- Apply when the ambient temperature is 40°F and rising
- Apply with a brush, roller or squeegee
- Do not dilute or thin

Prepare substrate to ensure the surface is free of debris, moisture or contaminants. Apply resin at a rate of two (2) gallons per 100 ft² or 30 wet mils thick. Primer is not required. Immediately embed polyester reinforcement into wet resin. NOTE: For repair applications, center polyester over crack and exceeding the crack or hole by 3” on all sides. Saturate polyester reinforcement at a rate of two (2) gallons per 100 ft², or 30 wet mils, ensuring that the polyester reinforcement is completely embedded and covered. Allow to dry. Apply a finish application of resin at a rate of two (2) gallons per 100 ft² or 30 wet mils. If granular aesthetic is desired, broadcast granules into the finish coat before the surface forms a skin.

Clean-Up: Clean tools using petroleum solvents such as mineral spirits. Cured resin may be disposed of in standard landfills.

Technical Assistance and Services
CertainTeed provides technical assistance in the product selection, specification and application guidelines for all CertainTeed commercial roof systems. Field representatives are available for consultation in each region.

For more information, contact CertainTeed Commercial Roofing Technical Services at 800-396-8134 ext. 2 or rpg.com.services@saint-gobain.com.
